

From data to solutions • Subsurface Evaluations • Laboratory Services • Recruitment Services

Wellsite & Onsite Services

PanTerra provides wellsite and onsite services to the international Oil & Gas and Geothermal Energy Industry. At the wellsite we handle and process your valuable cores carefully to ensure high quality data gathering either directly onsite by our engineers or in PanTerra's rock and fluids laboratory. The latter is fully equipped for Routine & Special Core Analysis, PVT & Enhanced Oil Recovery studies and Geological Core Evaluation.

Water injection studies will benefit from the empirical data generated by PanTerra's onsite core flood rig (ASCET), whilst process water treatment can be optimized using our mobile particle analysis system.

Personnel and equipment are mobilized from bases located in the Netherlands and Oman.

Onsite Services we provide:

- Core Handling
- Core Preservation (Wax Seal)
- Core Transport
- Core Photography (WL + UV)
- Core Slabbing
- Core Plugging for RCA and SCAL
- Core Gamma Logging
- Core Orientation & Goniometry
- Onsite Core Flooding for PWRI (ASCET)
- Onsite Particle and Droplet Size Analysis
- (Geothermal) Water, Oil and Gas Sampling
- PVT Sampling
- Water Analysis
- H₂S, BTEX, Mercaptans Measurement
